## ABOUT THE OECD

The Organisation for Economic Co-operation and Development (OECD) is an intergovernmental organisation in which representatives of 30 industrialised countries in North America, Europe and the Asia and Pacific region, as well as the European Commission, meet to co-ordinate and harmonise policies, discuss issues of mutual concern, and work together to respond to international problems. Most of the OECD's work is carried out by more than 200 specialised committees and working groups composed of member country delegates. Observers from several countries with special status at the OECD, and from interested international organisations, attend many of the OECD's workshops and other meetings. Committees and working groups are served by the OECD Secretariat, located in Paris, France, which is organised into directorates and divisions.

The Environment, Health and Safety Division publishes free-of-charge documents in ten different series: **Testing and Assessment; Good Laboratory Practice and Compliance Monitoring; Pesticides and Biocides; Risk Management; Harmonisation of Regulatory Oversight in Biotechnology; Safety of Novel Foods and Feeds; Chemical Accidents; Pollutant Release and Transfer Registers; Emission Scenario Documents; and the Safety of Manufactured Nanomaterials.** More information about the Environment, Health and Safety Programme and EHS publications is available on the OECD's World Wide Web site (<http://www.oecd.org/ehs/>).

**This publication was developed in the IOMC context. The contents do not necessarily reflect the views or stated policies of individual IOMC Participating Organizations.**

**The Inter-Organisation Programme for the Sound Management of Chemicals (IOMC) was established in 1995 following recommendations made by the 1992 UN Conference on Environment and Development to strengthen co-operation and increase international co-ordination in the field of chemical safety. The participating organisations are FAO, ILO, OECD, UNEP, UNIDO, UNITAR and WHO. The World Bank and UNDP are observers. The purpose of the IOMC is to promote co-ordination of the policies and activities pursued by the Participating Organisations, jointly or separately, to achieve the sound management of chemicals in relation to human health and the environment.**

## FOREWORD

In the Council Decision-Recommendation on the Co-operative Investigation and Risk Reduction of Existing Chemicals [C(90)163/Final] it was decided that “Member countries shall co-operatively investigate high production volume (HPV) chemicals in order to identify those which are potentially hazardous to the environment and/or to the health of the general public or workers... [and] For purposes of this Decision-Recommendation HPV chemicals are those chemicals **included in the OECD Representative List of High Production Volume (HPV) Chemicals, as established and updated regularly.**”

This is the updated (2007) list of chemicals referred to in the Council Act. The Joint Meeting of the Chemicals Committee and the Working Party on Chemicals, Pesticides and Biotechnology recommended that this list be derestricted. It has been made public under the responsibility of the Secretary-General of the OECD.

## THE 2007 OECD LIST OF HIGH PRODUCTION VOLUME CHEMICALS

The list in this document contains those chemicals which are produced or imported at levels greater than 1,000 tonnes per year in at least one member country/region.

It has been compiled based upon submissions from eight member countries in addition to the European Union's HPV list according to EC Regulation 793/93<sup>1</sup>. It is used by member countries to choose chemicals on which to make a hazard assessment for human health and the environment in the context of the OECD HPV Chemicals Programme.

These hazard assessments, which are a fundamental part of the OECD Existing Chemicals Programme, are based on a relatively restricted set of data elements, the Screening Information Data Set or SIDS. The intention is to screen chemicals for potential hazards, so that resources can be concentrated on undertaking further work on chemicals of concern.

Using the data from the SIDS, mainly provided by co-operation with the chemical industry, Member countries prepare a SIDS Initial Assessment Report, SIAR, which highlights any potential hazard on the chemical.

The SIAR is discussed at a meeting of experts from all Member countries, from other international organisations, and from non-Member countries, as nominated by the United Nations' International Programme on Chemical Safety (IPCS), by Intergovernmental Forum on Chemical Safety (IFCS), as well as representatives of the manufacturing companies. The SIAR, amended as appropriate, is made available world-wide by publication through the United Nations Environment Programme (UNEP) Chemicals.

In the attached 2007 OECD List of High Production Volume Chemicals, the various columns indicate:

- CAS:** Chemicals Abstract Registry Number
- SIDS:** Those chemicals which are currently or have been investigated in the OECD HPV Chemicals Programme; (details can be found on the OECD HPV database, <http://www.oecd.org/env/existingchemicals/data>)
- Chemical Name:** The name of the chemical, abbreviated as necessary to 80 characters
